

1 Preceding coursework

Inherited starting point

DETR + Modal Dropout
RT-DETR Additive; tiling and CMX
FAM on RT-DETR
Deformable DETR + FAM

2 Post-coursework exploration

Previous protocol

Lazy / Eager / Frozen FAM
Spatial Dropout and SSJ
Deformable DETR + FAM + SSJ
Complete DINO baseline

3 Reproducibility audit

Protocol redesign

CUDA variability and transferred person head
Validation and checkpoint audit
Training-only Modal Dropout
Isolated processes and paired seeds

LOCKED PROTOCOL

4 Locked-protocol evaluation

Principal thesis evidence

RT-DETR: six configurations × five seeds
Diagnostics, level ablation, bounded offsets
Error analysis, Carnation, compute
YOLOv10: Additive versus FAM × five seeds
