

1 Previous work

Inherited starting point

DETR + Modal Dropout
RT-DETR Additive; tiling and CMX
FAM on RT-DETR
Deformable DETR + FAM

2 Exploratory development

Previous protocol

Lazy / Eager / Frozen FAM
Spatial Dropout and SSJ
Deformable DETR + FAM + SSJ
Complete DINO baseline

3 Reproducibility audit

Protocol redesign

CUDA variability and transferred person head
Validation and checkpoint audit
Training-only Modal Dropout
Isolated processes and paired seeds

CONTROLLED MULTI-SEED EVIDENCE

4 Historical locked evaluation

FAM reference evidence

RT-DETR: six configurations x five seeds
Diagnostics, bounded offsets and error analysis
Carnation stress test and compute
YOLOv10 transfer: Additive versus FAM

5 Validation-led extension

Stage A / Stage B

Whole-video validation and best checkpoints
P2, resolution, gating and RCRA ablations
Matched full-data FAM versus RCRA
Paired 708-frame modality characterization

6 Frozen follow-ups

Late frozen evidence

Unused-acquisition confirmation; synthetic stress
Mixed consistency and Box-Guided P3
RT-DETRv2 + FAM allocation screen
YOLO26 Additive baseline-vitality screen
